Evaluation Methodology

BI Scorecard evaluates vendor products with the view of a customer who wishes to buy a full BI suite or integrated toolset. Products are evaluated according to major functional areas ranging from query and reporting to architecture and administration. Within each functional area, we score vendors on various features. This list of criteria is based on:

- Features that customers often look for in evaluations
- Unique capabilities identified while evaluating products
- Vendor marketing claims that are either a point of differentiation or confusion

To evaluate products, we rely on vendor briefings, customer feedback, and newsgroup postings. To ensure an objective, consistent comparison of products, we also evaluate the software hands-on. When a task is not apparent via the menus or online help, we rely on vendor documentation. Poor documentation for complex products can hurt a vendor's evaluation.

Each feature is assigned a score of 0 to 3:

Score	Explanation
3	Exceptional capabilities, beyond what is generally available out-of-the-box
2	Very good capabilities
1	Limited capabilities, difficult to do, or may require a work around
0	Minimal capabilities out of the box. The software may require customization or coding to accomplish.

Summary scores are determined by an evaluation of approximately 300 detailed criteria for BI platforms and for specialty products, almost 100 detailed criteria. Weightings of individual criterion greatly affect summary scores. We advise customers to assign their own weightings to criteria to determine a best-fit BI solution.

QlikView 8.2 was first evaluated in 2008. QlikView 10 was evaluated in Q1 2011.
